Parker's Eclipse Series

Meriden, Conn., Jan. 22, 1912.

TO THE TRADE:

To supply the demand for a strictly high grade vise at a moderate price, we take pleasure in offering by far the best value ever placed on the market. We have incorporated in the **Eclipse** series some features that are distinctively "Parker."

First—The steel faces are milled and fitted to the jaws, and are renewable—distinctively "Parker."

Second—The saddle or screw governor, which has been so long recognized as highly important in the working of a vise—distinctively "Parker."

Third—The absolute fit of the jaws—distinctively "Parker."

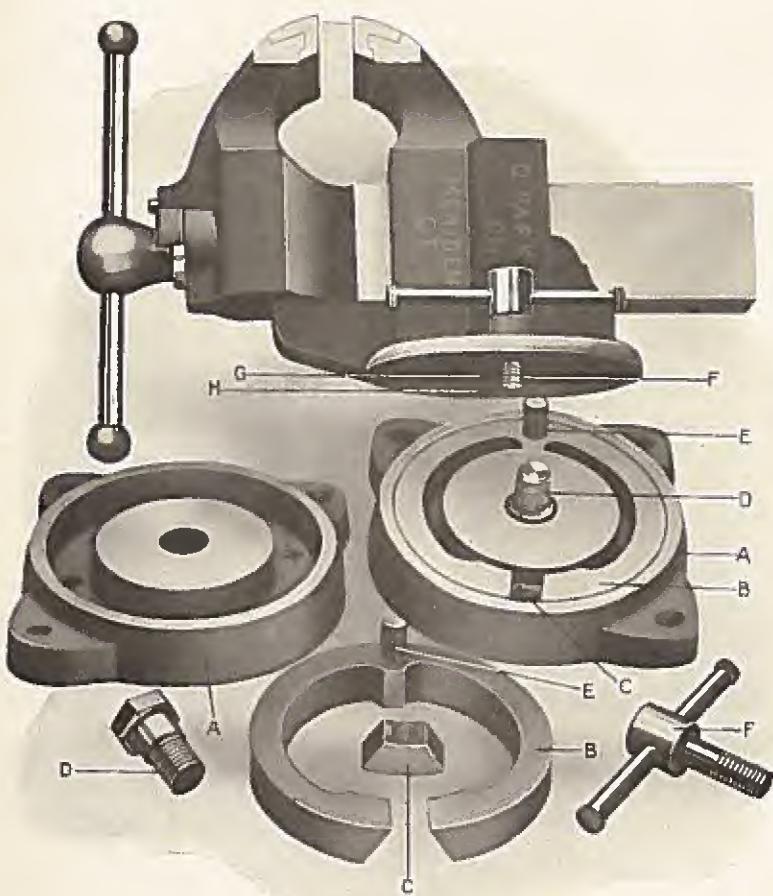

Fourth—The screw and nut are carefully threaded, and the jaws make immediate response to the action of the screw—distinctively "Parker."

The swiveling device employed on this series is a patented feature, and is operative at any and all points, and is adjustable—that is, can be converted to the use of a left-hand workman. We challenge the world to show a more positive lock, or one more easily operated.

We guarantee this series against breakage caused from any defects in manufacture or materials used. It will stand more than reasonable use or abuse, but **can** be broken. We will cheerfully allow all claims for breakage where it can be shown that we are in any way responsible. We have made and sold vises for 75 years, and unhesitatingly state that the **Eclipse** Series is the best value ever offered to the trade, and is the superior of any vise on the market with the exception of our best quality. Compare it in detail with the best of any other make, and be convinced.

Yours truly,

THE CHAS. PARKER CO.

Parker's Patent Vise Swivel

Illustration on opposite page shows working parts of Parker's Swivel Vise Base, patented November 22, 1910.

As will be noted from illustration, base "A", is designed with recess to receive expansion ring "B", also has hole in center to receive bolt "D", which is screwed into threaded hole "G", in center of vise flange. The duty of this bolt is to hold base to vise.

The expansion ring "B", is split at one side with wedge shape opening to receive steel wedge "C", and on the other side, has a stud "E", perpendicular to face of ring; this stud serving the double duty of keeping the dirt out of recess in base and also centering the wedge "C", in position to receive draw bolt "F".

This bolt "F", is operated by small lever on top of vise flange, which turns bolt into wedge "C"; the wedge is drawn up expanding the ring "B", against the wall of the base "A", forming a positive grip.

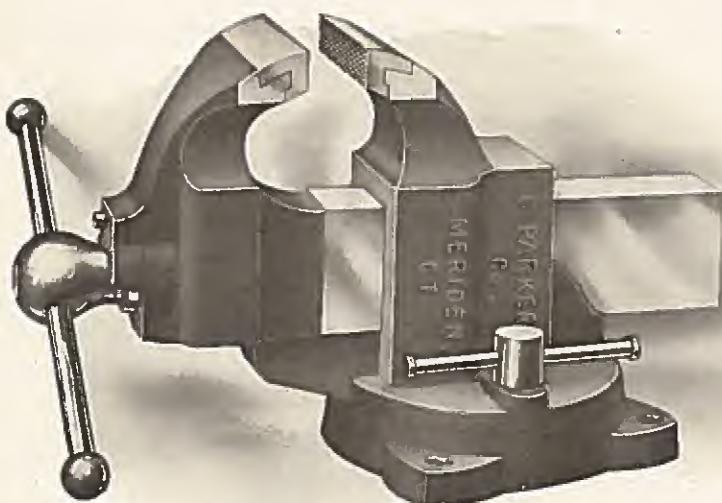

This swivel can be operated either from the right or left side of vise by turning out the center bolt "D", lifting vise off base and turning the ring "B" around so that the stud "E" enters the hole on the opposite side of hole "H", then put draw bolt "F" in hole "H", and turn bolt into wedge "C", after securing base to vise with center bolt "D".

Yours truly,

THE CHAS. PARKER CO.

PARKER'S ECLIPSE SERIES

ANNOUNCEMENT

IN presenting this catalogue of the Parker Vises, we particularly desire to call attention to recent and important improvements, as well as to show by the illustrations some of our latest productions, which not only represent perfection of skilled workmanship, but also the results of over seventy years' of ceaseless effort to produce the very best Vises. These Vises are adapted to Locomotive Works, Car Builders, Wood Workers, Machinists, Gun, Sewing Machine and Carriage Manufacturers, Jewelers and Artisans generally. A new line of Vises is shown on pages 6, 7, 15, 20 and 21, for which we claim superiority over any other Vises made. These Vises are made with a patented reinforced sliding jaw, consisting of a solid steel bar inserted the entire length of the slide, and thoroughly welded into the casting, thus rendering the slide, or movable jaw, practically unbreakable. No other Vises made have this feature, and in connection with the fact that the Vises are made from a mixture of cast iron and Bessemer steel, we unhesitatingly guarantee them to be the strongest and most durable Vises in the market. After seventy years' experience in manufacturing and supplying Vises, our older standard lines need no introduction to the trade; the same care in construction and quality of material will be maintained in every line, and improved where improvement is possible.

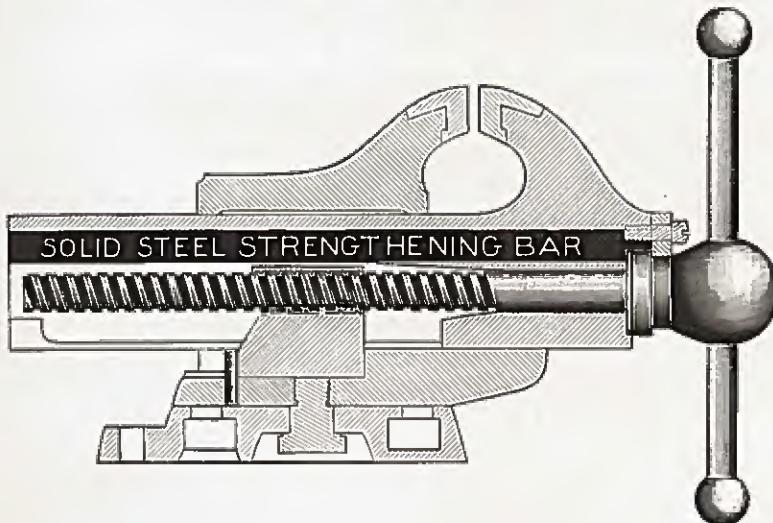

Respectfully yours,

THE CHARLES PARKER CO.

THE CHARLES PARKER COMPANY

Slide Strengthener Solid Steel Bar.

Patented January 2, 1906.

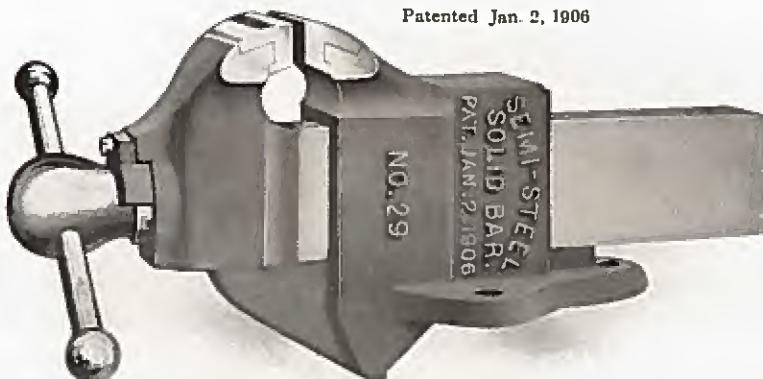

The above cut representing a half section of Vise, showing a Solid Steel Strengthening Bar inserted the entire length of Slide, rendering the Slide, or movable Jaw, practically unbreakable; this Patented improvement used only on our best Vises, illustrated on pages number 6, 7, 15, 20 and 21.

PARKER'S

Improved Quick Action Swivel Vises.

Semi-Steel

These Vises are the most convenient and quickest working ever devised. The only Vises that grasp any size piece of work by one motion of the hand and which can be used with either right or left hand with equal facility. These Vises, as well as our other high grades, are made of a blending of steel and best iron; a new departure in Vise construction, and adding very materially to the life of the tool. They are manufactured with great care, by the use of improved machinery, and all parts are interchangeable.

For section view of Parker's Quick Action Swivel Vise see page number 32

THE CHARLES PARKER COMPANY

Series No. 90

Fig. 2.

PARKER'S

Improved Quick Action Swivel Vises.

Semi-Steel

DIRECTIONS

In order to open the Jaws, lift the handle to a horizontal position, or as high as it will go, and draw towards you as shown in fig. 1; in this way the sliding Jaw can be moved instantly to any position. In order to grasp the work, push in the sliding Jaw until it presses against the work; then depress the handle, (see fig. 2), which causes the Jaws to securely grasp the work.

Number	Weight Lbs.	Jaw Inches	Vise Opens	List \$	Discount %	Net Cost	Sell \$
90	8	2	2	5.00			
92	25	3	3½	8.50

98	48	4	7½	14.00			

Number 98 Vise has Coachmakers' Jaws.

For Price List of Repairs, Series No. 90, see page number 68.

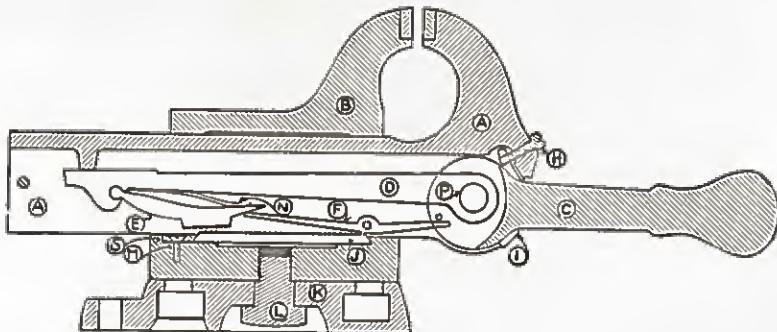

THE CHARLES PARKER COMPANY

PARKER'S

Improved Quick Action Swivel Vises.

Sectional view of the Vise showing its working parts.

(A) Slide, (B) Back Jaw, (C) Handle, (D) Lever, (E) Rack, (F) Lifter, (H) Saddle screw, (I) Saddle, (J) Bottom Rack, (K) Swivel Base, (L) Center Bolt, (M) Wedge Screw, (N) Top Rack Spring, (P) Connecting pin for Lever and Handle, (S) Rack Wedge.

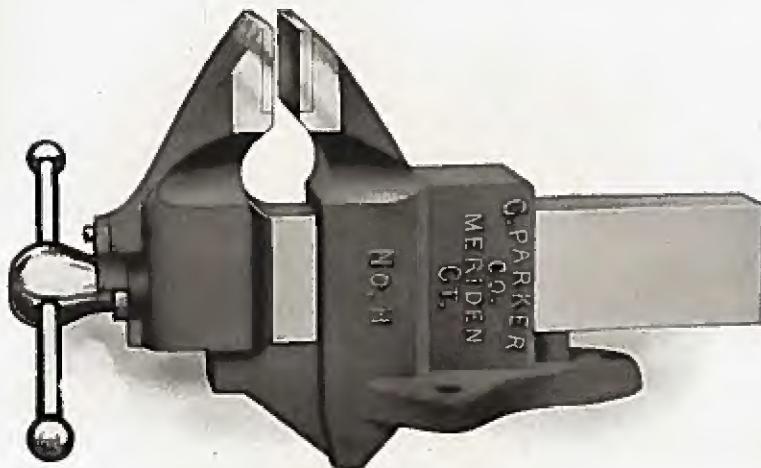

NOTICE

That if the handle should not go low enough for convenience, it can be made to go lower by depressing it just before it touches the work to be held; if the handle fails to remain in a horizontal position (see fig. 1), the screw (H) can be tightened to hold it. Care should be taken that the screw (M) is down, so as to keep the rack (J), from lifting with the clutch (E); the sliding Jaw (A) can be removed by taking out the pin at the end of Slide, keeping the handle horizontal. If grease or dirt get on the rack (J) the Slide should be withdrawn and the rack and clutch thoroughly cleaned.

Particular attention has been paid to the proper proportion of parts, and the great strength of the Parker Vises will always be found where the strain is most severe.

THE CHARLES PARKER COMPANY

Series No. 65

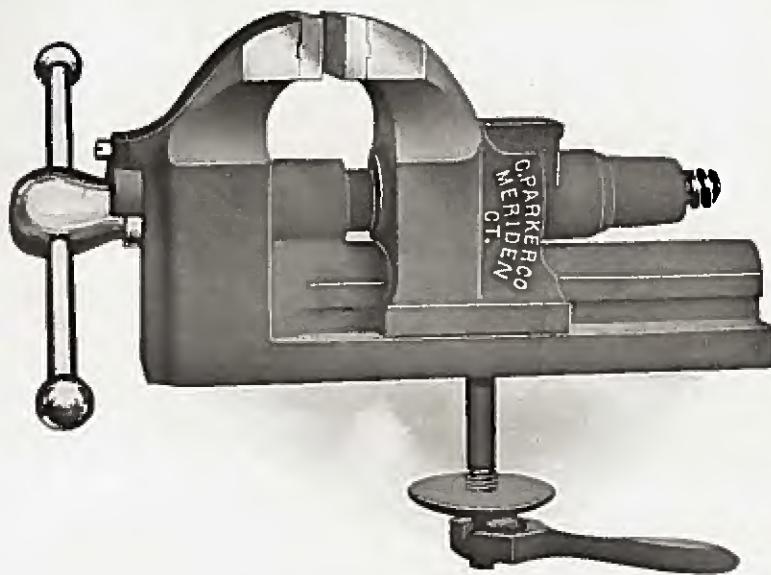

PARKER'S

Swivel Heavy Chipping or Filing Vises.

These Vises are made exceedingly strong to allow chipping or filing without danger of breaking the Vise. The steel Jaws are closely fitted and held by screws, so that after years of use new ones may easily be substituted; the screw is encased and thoroughly protected, and is so located that the operator may obtain its full power, the back jaw is the movable one, which allows the work to rest upon the bench while the Vise is being operated.

THE CHARLES PARKER COMPANY

Series No. 65

PARKER'S

Swivel Heavy Chipping or Filing Vises.

Swivels on the Bench.

The steel faces of Series No. 65 are milled and fitted to the jaws, and are renewable.

THE CHARLES PARKER COMPANY

PARKER'S

Special Automobile Vise

The illustration shows special Vise, with base bolted to running board of automobile, and with Vise over the base in position for quick adjustment. The adjustment is very simple. Bring line on Vise flange even with line on base, lower side bolt into base opening; turn the Vise to position desired. A turn of the tightening stud is all that is necessary to secure the Vise.

These Automobile Vises are made in two sizes. For description see numbers 229 and 239, page 7.

When ordering parts from this list, give number of part and name of part.
